

TURN SUMMARY

1. The Strategy Phase
2. The Movement Phase
3. The Shooting Phase
4. The Combat Phase

1. STRATEGY PHASE (pg. 116)

The Strategy phase is broken up into several sub-phases:

1. Start of Turn

- Resolve start of the turn actions (e.g., move remains in play spells, ring the Screaming Bell, etc.).

2. Command

- Resolve any abilities of characters that are not fleeing that are used in the Command sub-phase.

3. Conjunction

- Active players Wizards can cast Enchantment or Hex spells. Dispel remains in play spells.

4. Rally Fleeing Troops

- The active player attempts to rally their fleeing units.

RALLY FLEEING UNITS (pg. 117)

Players must attempt to rally any fleeing units in this phase. To rally a fleeing unit, take a Rally Test by rolling 2D6. If the result is equal to or lower than the unit's Leadership, the test is passed. If higher, the test is failed. A natural double 6 is an automatic failure. A natural double 1 is an automatic pass.

- If the test is failed, the unit continues to flee.
- If the test is passed, the unit has rallied.

Apply a +1 modifier to the Leadership characteristic (max 10) when attempting to rally a unit that contains a Musician.

Rallied Units

A rallied unit may immediately perform a free reform (pg. 125). The unit cannot charge this turn and counts as moved for the purposes of shooting but can otherwise act normally.

Insurmountable Losses

- Unit that is below 50% of its starting number of models applies a -1 modifier to its Rally Test.
- Unit that is below 25% of its starting number of models can only pass its Rally Test on a roll of natural double 1.

Fleeing Units

Units (failed to rally) continue to flee in the Compulsory Moves sub-phase of the Movement phase.

LINE OF SIGHT (pg. 103)

Determining Line of Sight (LOS)

- To have LOS you must be able to draw a straight, uninterrupted line from within the model's vision arc to any part of the other model.
- A model is always within its own vision arc and always has LOS to itself and its unit.
- If at least one model in a unit has LOS to at least one model from another unit, that unit can 'see' the other unit.

Obscured LOS

To determine if LOS is obscured, look from the model's point of view and assess if other models or terrain block LOS:

- If the other model or unit is fully visible, they are not in cover (they are 'in the open').
- Up to ½ of the model/unit is obscured it has partial cover.
- If ½ or more of the model/unit is obscured it has full cover.

FORMING UNITS (pg. 100)

All models are formed into units, including single models.

Formation Types

All units must be in a formation based on the special rules listed for the unit (Skirmish, Open Order, and Close Order). Units with multiple formation special rules can choose their formation during deployment (change formation type by reforming during the Movement phase).

Combat Order

Formation is wider than it is deep or square.

- **Can claim a rank bonus.**
- **A unit in Close Order:**
 - Gains +1 combat result point in combat.
- **A unit in Open Order:**
 - **Quick Turn:** After moving, unless it charged, marched, or fled, may pivot about its center up to 90°.
 - **Dispersed Ranks:** Does not become disrupted by difficult or dangerous terrain.

Marching Column

Formation is deeper than it is wide.

- Cannot claim a rank bonus.
- Cannot charge.
- Can triple its Movement characteristic.

'disrupted' Units

A unit becomes disrupted if:

- Engaged in the flank or rear by a unit strength 5 or more (non-skirmishing) enemy unit.
- Ends its movement with 25% or more of models within difficult terrain or if straddling a low linear obstacle.

A disrupted unit cannot claim a rank bonus. Enemy skirmishers do not cause disruption (see pg. 184).

COMMAND GROUPS (pg. 198)

Position Within The Unit: Command models are placed in the center of the front rank. The standard bearer (if present) takes precedence in the center most position of the front rank.

"Make Way"! When a unit turns or reforms, the command group is automatically repositioned to the front rank.

Champions: Models in base contact with a Champion can direct Combat attacks against the champion. Champions can issue and accept challenges. Champions as casualties:

- **Shooting:** Not counted as a casualty from shooting unless:
 - They are the last remaining model in the unit.
 - They are specifically targeted by an attack.
 - They are underneath a template attack.
- **"Look Out, Sir!":** If hit by a shooting attack, and if there are 5+ models in the unit, roll a D6. On a 1 the champion is hit. On a 2+ another model is hit instead.
- **Combat:** Not counted as a casualty in combat unless:
 - They are the last remaining model in the unit.
 - Attacks were directed against the champion specifically (excess wounds do not spill over into the unit).

Standard Bearers: Add a +1 CR point in combat. The last model to be removed prior to a unit champion.

Musicians: The last model to be removed prior to a unit champion and standard bearer.

- **Onwards To Victory!** In a drawn combat, add +1 CR point.
- **Steadying Rhythm:** +1 to Leadership characteristic (max 10) when attempting to rally.
- **Quick Time:** +1 to Leadership characteristic (max 10) when testing to march within 8" of an enemy unit.

Wizards will be level 1, 2, 3, or 4.
Wizards must choose a single lore that is available to them.

Spells & Spell Generation

Roll D6 equal to the Wizard’s level to randomly generate the spells available for a game. Reroll duplicate results. One generated spell can be discarded and replaced with the signature spell.

Spell Categories & Casting

A Wizard that is not fleeing can attempt to cast each of their spells once per turn. Wizards engaged in combat can only cast Assailment spells or range ‘self’ spells. Spells fall into six categories:

- **Enchantment:** Cast during the Conjunction sub-phase of the Strategy phase. Enchantment spells that require a target can only target friendly units. Casting the same spell on the same unit in the same turn has no further effect.
- **Hex:** Cast during the Conjunction sub-phase of the Strategy phase. Hex spells that require a target can only target enemy units. Casting the same spell on the same unit in the same turn has no further effect.
- **Conveyance:** Cast at any point during the Remaining Moves sub-phase of your Movement phase. Conveyance spells that require a target can only target friendly units. A unit cannot be affected by the same spell more than once per turn.
- **Magic Missiles:** Cast during the Shooting phase. Magic Missiles can only target enemy units and the Wizard must have LOS to the target. A successfully cast Magic Missile automatically hits its target (no To Hit roll is made).
- **Magical Vortex:** Cast during the Shooting phase. Does not require a target. Place the round template on the battlefield, not touching the bases of any models, and with the central hole within the range for the spell. Once placed, a Magical Vortex stays on the battlefield (unless it moves off table or is dispelled). Some move at the start of the turn. If a Magical Vortex ends a move over a unit, continue to move it in the same direction until it can be placed not touching the bases of any models.
- **Assailment:** Cast when the Wizard fights during the Combat phase. Can only be cast by Wizards engaged in combat and can only target enemy units the caster is engaged with. A successfully cast Assailment spell automatically hits its target (no To Hit roll is made).

Choosing A Target

Unless stated otherwise, to choose a target:

- Target must lie within the Wizard’s vision arc, but the Wizard does not need a LOS to the target.
- Target must lie within the spell’s range.
- Spells cannot target units engaged in combat.
- Range ‘self’ spells do not require a target – the Wizard is the target, and any effect is measured from the caster. Wizards can cast range ‘self’ spells when engaged in combat.

Casting Roll, Casting Result & Casting Value

To cast a spell roll 2D6 and add the Wizard’s casting level to the result (this is the casting result). If the result is equal to or higher than the casting value of the spell, it is successfully cast. If the result is lower than the casting value of the spell, it is not cast.

Magic Resistance (-X)

The casting roll of any spell (or bound spell) that targets an enemy unit that includes one or more models with Magic Resistance suffers a modifier, as indicated by (-X). If more than one model has Magic Resistance, apply the higher modifier (not cumulative).

A model can only cast a single Bound Spell per phase. Possessing a Bound Spell does not make a model a Wizard. If a Power Level is given, it is added to the casting result. The result of the casting roll is the casting result. Perfect Invocations, Miscasts, and Outclassed in the Art results DO NOT apply to Bound Spells. Bound Spells can be dispelled normally, and magic items that dispel or destroy a spell are applied.

Perfect Invocations

If a natural double 6 is rolled for a casting roll, the spell is cast regardless of its casting value or modifiers. A Perfect Invocation cannot be dispelled.

Miscast

If a natural double 1 is rolled for a casting roll, regardless of the casting result, the spell is ‘miscast’ and unless otherwise stated, is not cast. Roll immediately on the Miscast Table below.

Wizardly Dispel & Fated Dispel

A Wizard may attempt to dispel a spell if within dispel range of the casting Wizard. Level 1/2 Wizards have a dispel range of 18”, and level 3/4 Wizards 24”. Wizards who are engaged in combat, fleeing, or not on the battlefield cannot dispel spells. Once per turn you can attempt a Fated dispel.

Dispel Roll & Dispel Result

To dispel a spell roll 2D6 and if using a Wizardly dispel, add the Wizard’s casting level to the result (this is the dispel result). No modifier is added for a Fated dispel. If the dispel result exceeds the casting result, the spell immediately ends. If the result is equal to or less than the casting result, then it is not dispelled.

Unbinding & Outclassed In The Art

If a natural double 6 is rolled for a dispel roll, the spell immediately ends regardless of the casting result or modifiers. If a natural double 1 is rolled for a dispel roll, roll immediately on the Miscast Table.

Remains In Play Spells

Can choose to end the spell at the start of any phase, or the spell ends automatically if the casting is slain. Spell must be ended if you want to cast the same spell again. Can be dispelled in subsequent Conjunction sub-phases by exceeding the base casting value of the spell.

MISCAST TABLE (pg. 109)

2D6	RESULT
2-4	Dimensional Cascade: Center the 5” blast template over the Wizard. Every model whose base lies underneath the template risks being hit (see pg. 95) and suffering a single Strength 10 hit with AP -4.
5-6	Calamitous Detonation: Center the 3” blast template over the Wizard. Every model whose base lies underneath the template risks being hit (see pg. 95) and suffering a single Strength 6 hit with AP -1.
7	Careless Conjunction: The Wizard suffers a single Strength 4 hit with AP -1.
8-9	Barely Controlled Power: The spell is cast (at its casting value for dispel purposes). You cannot attempt to cast any more spells for the remainder of the turn.
10-12	Power Drain: The spell is cast with a Perfect Invocation. You cannot attempt to cast any more spells for the remainder of the turn.

2. MOVEMENT PHASE (pg. 118)

The Movement phase is broken up into several sub-phases:

1. Declare Charges & Charge Reactions
2. Charge Moves
3. Compulsory Moves
4. Remaining Moves

1" RULE (pg. 118)

All units cannot end their movement within 1" of an enemy unit. Units can pass within 1" of an enemy unit during movement.

DECLARE CHARGES & CHARGE REACTIONS (pg. 119)

To declare a charge, indicate which unit is charging, and the enemy unit it is charging (charge target).

- One or more models in the charging unit must draw LOS to the charge target and the charge target must lie at least partially within the front arc of the charging unit.
- You can always measure the distance between the charging unit and charge target before declaring the charge.

Who Can Charge?

Not all units can charge:

- Units engaged in combat cannot charge.
- Fleeing units or units that rallied this turn during the Strategy phase cannot charge.
- Units in Marching Column CAN declare a charge but CANNOT make a charge move.
- Units cannot charge if the charge is impossible (charge target lies beyond the maximum possible charge move).

Charging More Than One Unit

Must charge a single target, unless it is impossible to do so without contacting other enemy units. In this case, all charge targets resolve their charge reactions separately.

Charge Reactions

Charge targets can declare one of three charge reactions:

- **Hold:** Charge target holds its position. Fleeing units cannot hold and units already engaged in combat can only hold.
- **Stand & Shoot:** Can be declared if the charge target is armed with missile weapons and can draw LOS to the charging unit. If the shooting distance is equal to or less than the Movement characteristic of the charging unit, the unit cannot shoot. Otherwise, the unit can shoot, even if the shooting distance is beyond the maximum range of the missile weapons. Charging units do not take Panic Tests from this shooting. Fleeing units and units already in combat cannot declare Stand & Shoot.
- **Flee:** Unless engaged in combat, a unit may flee. Fleeing units can only flee as a charge reaction. A fleeing unit:
 - Pivots about its center (pg. 125) to face directly away from the charging unit. The unit then makes an immediate flee move away from the charging unit (pg. 132).
 - If the unit does not flee far enough, it may be 'run down' (destroyed) by the charging unit (pg. 129).

Charge Reactions & Multiple Charging Units

A unit can only Stand & Stoot in response to one charge per turn and will Hold against all other charging units. If a unit flees, it does so from the charging unit that has the highest unit strength. If multiple enemy units have the same unit strength, randomly determine which unit to flee from. This may cause a unit to flee through another enemy unit (see pg. 133).

COMPULSORY MOVES (pg. 122)

Fleeing Units

Fleeing units that have failed to rally continue to flee before any other movement during this sub-phase.

Other Compulsory Movement

Other units subject to compulsory movement follow normal movement rules unless stated otherwise. After fleeing unit movement is resolved, remaining compulsory movement is resolved in the order determined by the unit's controlling player.

Reinforcements

Enter during Compulsory Moves. Place with rear arc in full contact with battlefield edge, facing towards center of battlefield. Cannot march and counts as having moved for shooting but can move during the Remaining Moves sub-phase.

REMAINING MOVES (pg. 112)

The active player resolves any remaining 'normal' movement for units that did not move during the Charge Moves or Compulsory Moves sub-phases.

Basic Movement

Units move forward up to their Movement characteristic. If a unit has multiple movement characteristics, the entire unit moves at the slowest rate. Units must move forward in a straight line unless performing a manoeuvre.

Marching

A marching unit can double its Movement characteristic. A marching unit is subject to the following rules:

- If you begin the march within 8" of an enemy unit, make a Leadership test. If passed the unit may march. If failed, the unit cannot march but may move normally. Apply a +1 modifier to the Leadership characteristic (max 10) to this test if the unit contains a Musician.
- A close or open order unit in March Column can triple its Movement characteristic when marching.
- Cannot shoot in the Shooting phase nor can models within the unit cast Magic Missile or Magical Vortex spells.
- Can only wheel to change direction. No other manoeuvres can be used.

Manoeuvres

Movement may include the following manoeuvres :

- **Turn:** All models remain in place and are turned through 90° or 180° to face their side or rear. Each 90° turn uses a ¼ of the units Movement characteristic. Command models are automatically moved into the front rank after a turn.
- **Wheel:** To wheel, the leading edge of the unit moves forward, pivoting round one of its front corners. If the unit is charging only a single wheel is allowed, otherwise a unit may wheel multiple times during a move.
- **Move Backwards:** Backwards movement is done at ½ rate.
- **Move Sideways:** Sideways movements is done at ½ rate.
- **Redress the Ranks:** A unit can increase or decrease its front rank by 5 models using ½ of its Movement characteristic.
- **Reform:** A unit can use its entire move to both pivot about its center to change facing up to 180°, to rearrange its ranks/files to change formation, or adopt a different formation.

The Ends Of The World

Part of a unit may cross beyond the edge of the battlefield, so long as it ends its movement completely upon the battlefield.

CHARGE MOVES (pg. 121)

Active player resolves charge movement one unit at a time.

Determine Charge Range

A unit's charge range is the combination of the unit's Movement characteristic and a Charge roll. Roll 2D6 and discard the lowest result. Add the higher result to the Movement characteristic of the charging unit. Terrain and other special rules may further modify the charge range. If the charge target is not within charge range, the charge is failed.

Maximum Possible Charge Range

Maximum possible charge range is determined by adding 6 to the charge unit's Movement characteristic. If the unit has

Swiftstride, add a further +3" to the total.

Failed Charge

If a charge is failed, the charging unit will move towards the charge target a distance equal to the charge roll.

THE CHARGE MOVE (pg. 126)

A charging unit:

- Must endeavour to bring as many models as possible in its front rank into base contact with models in the charged unit.
- Must move by the shortest route possible to contact the charged unit.
- Must move forward in as straight a line as possible.
- After contacting the charge target, must ensure that it is aligned against the charge target.

Manoeuvring During A Charge

Unless otherwise stated, a charging unit cannot perform a turn, move backwards, move sideways, redress the ranks, or reform manoeuvre during its charge move. A charging unit can perform a single wheel during charge movement.

Aligning To The Enemy

Once the charging unit contacts the charged unit, it must perform a free wheel (if required) to bring its front rank into flush contact with the charged unit (unless charge target is skirmishers).

Flank & Rear Charges

The facing of the charge target a charging unit will contact is based on its starting position in relation to the charge target units arc the charging unit is within. If the charging unit is within two arcs, the arc that contains more models from the charging unit's front rank is used.

Unable To Align

If it is not possible to align the charging unit to the charge target, the charge target should align to the charging unit. If this is not possible, a gap can be left. Either way, if unable to align to the charge target, the charging unit has made a 'disordered charge.'

Disordered Charge

A charging unit that makes a disordered charge does not gain the Initiative modifier for charging (see pg. 146).

Charging Through Terrain

A charging unit that crosses difficult or dangerous terrain, or across a low linear obstacle is subject to the following:

- When making the Charge Roll, must use the lower result.
- Suffers a -1 modifier to its Movement characteristic.
- If at the end of the charge move, ¼ or more of the unit's models are in difficult terrain or straddling a low linear obstacle, the charging unit becomes 'disrupted' and cannot claim a rank bonus.

Charging A Fleeing Enemy

A charging unit has two options when the charge target flees:

- **Running Down The Foe:** Once the charge target completes the flee move, the charge move is done normally. If the charging unit contacts the fleeing unit, the fleeing unit is immediately destroyed (after aligning). If the fleeing unit is not contacted, the charging unit moves forward full distance.
- **Redirecting A Charge:** After the fleeing unit completes movement, the charging unit can redirect to a new target if:
 - The charging unit could have charged the new target at the beginning of the phase.
 - The new target was revealed by the fleeing unit.

To redirect, the charging unit must take a Leadership test.

If passed, resolve a charge against the new target.

The new charge target can only Flee or Hold. If the new target flees, the charging unit cannot redirect its charge again. If failed, the charging unit pursues the fleeing unit.

Accidental Contact

Non-charging units may make accidental contact. If a unit is contacted in its front arc that is not already engaged in combat, it may choose to:

- Commit to the combat, aligning to the unit that contacted it, with neither unit counting as having charged.
- Give Ground to avoid being drawn into combat.

If the unit is contacted in the flank or rear, the unit is moved the minimum distance away to maintain a 1" gap.

Accidental Contact During A Charge

If a charging unit would accidentally contact a unit, it must try to wheel to avoid the unit to complete the charge. If unable to avoid the contact, the charging unit has two options:

- **Halt The Charge:** Move towards the charge target but halt 1" away from the unit that is blocking the path forward.
- **Continue Ahead:** If the blocking unit is fleeing, the charging unit will contact it and align. The fleeing unit is immediately destroyed. The charging unit cannot attempt to reform. If the blocking unit is not fleeing, the charging unit redirects its charge into the blocking unit.

TERRAIN & MOVEMENT (pg. 135)

Open Ground & Hills

Unless otherwise stated, hills are open ground. Open ground does not impede movement in any way.

Difficult Terrain

If any part of a unit moves through difficult terrain during any part of its movement, apply a -1 to its Movement characteristic.

Dangerous Terrain

Apply a -1 to the unit's Movement characteristic as per difficult terrain. For each model in a unit that contacts dangerous terrain, take a 'Dangerous Terrain' test by rolling 1D6 per model. On a 2+, nothing happens. On a 1 the model loses one wound (no saves allowed).

Impassable Terrain

Units can never enter impassable terrain (but can fly over it).

High Linear Obstacles

Linear obstacles higher than 2" are impassable terrain.

Woods

Woods must be declared as being difficult or dangerous terrain.

Battlefield Decoration

Models can freely pass through small decorative elements of terrain less than 2" across.

3. SHOOTING PHASE (pg. 136)

The Shooting phase is broken up into several sub-phases:

1. Choose Unit & Declare Target
2. Roll To Hit
3. Roll To Wound & Make Armour Saves
4. Remove Casualties & Make Panic Tests

CHOOSE UNIT & DECLARE TARGET (pg. 137)

Active player chooses a unit that can shoot then completes the shooting sequence, repeating this until all units have shot.

Who Can Shoot?

To shoot, a unit must be equipped with missile weapons or the capability to cast spells. A unit cannot shoot if:

- It charged or marched during the Movement phase.
- It is engaged in combat.
- It is fleeing.

Check Line Of Sight (LOS)

Check LOS for all models in the unit. Only models with LOS can shoot at the target. Models in the front rank can shoot, and if specified for the weapon/rule, models in other ranks may shoot.

Check Range

Check the range to the target based on the weapon/spell for each shooting model. Cannot shoot beyond maximum range, except when choosing to Stand & Shoot as a charge reaction. If a charging unit lies beyond maximum range, Stand & Shoot is conducted at the maximum range of the weapon.

Declare Target

Active player declares a single valid enemy target for shooting. A unit cannot split shooting between multiple units.

How Many Shots?

A unit can shoot once during the shooting phase. A model can make a single shooting attack (ignore Attacks characteristic).

ROLL TO HIT (pg. 138)

Make a To Hit roll by rolling 1D6 per shooting model. Results that are equal to or greater than the target number is a hit.

BS	1	2	3	4	5
D6 Result	6+	5+	4+	3+	2+

Rolls Of A Natural 1 (To Hit)

A natural roll of 1 is always a miss.

Ballistic Skill (BS) 6 Or Higher

A model with BS 6 or higher that misses the first target number can reroll and score a hit using the second target number.

BS	6	7	8	9	10
D6 Result	2+/6+	2+/5+	2+/4+	2+/3+	2+/2+

To Hit Modifiers

To Hit modifiers are cumulative (except when noted). For models with BS 6+, modifiers only apply to the first To Hit roll.

MODIFIER	SITUATION
-1	Moving and shooting (-2 if Ponderous).
-1	Firing at long range (greater than ½ range).
-1	Standing and shooting.
-1	Target behind partial cover.
-2	Target behind full cover.

7+ To Hit

If a 7+ is required to hit the target, the D6 result must first score a natural 6, then reroll the D6. A hit is successful if the rerolled D6 is equal to the second target number below.

To Hit >	7	8	9	10
Results	6/4+	6/5+	6/6	Impossible

ROLL TO WOUND & MAKE ARMOUR SAVES (pg. 140)

For each successfully hit, make a To Wound roll by rolling 1D6. Cross-reference the Strength of the attack with the target's Toughness. Each D6 result that is equal to or greater than the target number is a successful wound. If a - is shown, the target is too tough for the attack to wound.

		TARGET'S TOUGHNESS									
WEAPON'S STRENGTH		1	2	3	4	5	6	7	8	9	10
	1	4+	5+	6+	6+	6+	6+	-	-	-	-
	2	3+	4+	5+	6+	6+	6+	6+	-	-	-
	3	2+	3+	4+	5+	6+	6+	6+	6+	-	-
	4	2+	2+	3+	4+	5+	6+	6+	6+	6+	-
	5	2+	2+	2+	3+	4+	5+	6+	6+	6+	6+
	6	2+	2+	2+	2+	3+	4+	5+	6+	6+	6+
	7	2+	2+	2+	2+	2+	3+	4+	5+	6+	6+
	8	2+	2+	2+	2+	2+	2+	3+	4+	5+	6+
	9	2+	2+	2+	2+	2+	2+	2+	3+	4+	5+
	10	2+	2+	2+	2+	2+	2+	2+	2+	3+	4+

Rolls Of A Natural 1 (To Wound)

A natural roll of 1 always fails to wound.

Determining Armour Value

A model's armour value is determined by the combination of the equipment the model is wearing/using. Models that are not wearing/using an armour are considered to have an armour value of 7+ (should a modifier ever improve this value).

Make Armour Saves

Make an Armour Save roll by rolling 1D6 for each wounded model and compare the result to the 'armour value':

- If equal to or higher, the wound is discarded.
- If less than the armour value, the wound is 'unsaved'.

Rolls Of A Natural 1 (Armour Save)

A natural roll of 1 always fails to save the wound.

Amour Piercing & Armour Bane

Armour Piercing (AP) is a negative modifier to an Armour Save roll. Amour Bane adds to the AP of an attack when a natural 6 is rolled to wound.

Ward Saves

A Ward Save is not modified by the AP of an attack. Make a Ward Save by rolling 1D6 for each wounded model and compare the result to the indicated Ward Save value (e.g., 4+):

- If equal to or higher, the wound is discarded.
- If less than the Ward Save value, the wound is 'unsaved'.

More Than One Save

A model that can make both an Armour Save and a Ward Save will always attempt to make the Armour Save first. If the Armour Save attempt fails, the model can then attempt to make its Ward Save.

Remove Casualties

Each unsaved wound causes one wound to be lost by the target unit or model (see pg. 102). A model reduced to zero wounds is removed. Units remove models from the ends of the rear rank, or front rank if only a single rank remains.

Make Panic Tests

A unit must make a Panic test if the unit has lost greater than 25% of its models based on the number of models the unit started with at the beginning of the shooting phase. To make a Panic Test, the unit rolls 2D6 against the units Leadership characteristic. If the test is passed (<= Leadership), there is no effect. If the test is failed (> Leadership), the unit will:

- **Fall Back Or Flee (>50%):** If a unit has greater than 50% of its models it started the battle with, it will ‘Fall Back In Good Order’. The unit moves directly away from the enemy unit that caused the panic test.
- **Flee (<=50%):** If a unit has 50% or fewer of its models it started the battle with, it will flee. The unit moves directly away from the enemy unit that caused the panic test.

No Need For Hysteries

A unit only takes a single Panic Test during the Shooting phase.

COMBAT WEAPONS (pg. 213)

WEAPON	S	AP	SPECIAL RULES & NOTES
Hand Weapon	S	-	-
Two/Additional Hand Weapon	S	-	Extra Attacks (+1), Requires Two Hands
Flail	S+2	-2	Requires Two Hands
Note: Strength modifier applies to first round of combat only.			
Great Weapon	S+2	-2	Armour Bane (1), Strike Last, Requires Two Hands
Halberd	S+1	-1	Armour Bane (1), Requires Two Hands
Morning Star	S+1	-1	-
Note: Strength modifier applies to first round of combat only.			
Whip	S	-	Fight in Extra Rank, Strike First
Lance	S+2	-2	Armour Bane (1)
Note: Can only be used on the turn the wielder charges. Subsequent turns the model must use its hand weapon.			
Cavalry Spear	S+1	-1	Fight in Extra Rank
Note: Strength and AP modifier apply only on the turn the wielder charges. Cannot make supporting attacks on the turn the wielder has charged.			
Throwing Spear	S	-	Fight in Extra Rank
Note: Can only be used on the turn the wielder charges. Subsequent turns the model must use its hand weapon.			
Thrusting Spear	S	-	Fight in Extra Rank
Note: Cannot make a supporting attack on the turn the wielder has charged. If the model is charged to its front arc, gain a +1 modifier to the models Initiative characteristic against the charging unit(s).			

WEAPON	R	S	AP	SPECIAL RULES
Longbow	30"	3	-	Armour Bane (1), Volley Fire
Shortbow	18"	3	-	Quick Shot, Volley Fire
Warbow	24"	S	-	Volley Fire
Handgun	24"	4	-1	Armour Bane (1), Ponderous
Pistol	12"	4	-1	Armour Bane (1), Quick Shot
Brace of Pistols (Ranged)	12"	4	-1	Amour Bane (1), Quick Shot, Multiple Shots (2)
Brace of Pistols (Combat)	-	S	-	Extra Attacks (+1), Requires Two Hands
Repeater Handgun	24"	4	-1	Armour Bane (1), Ponderous, Multiple Shots (3)
Repeater Pistol	12"	4	-1	Armour Bane (1), Quick Shot, Multiple Shots (3)
Crossbow	30"	4	-	Armour Bane (2), Ponderous
Repeater Crossbow	24"	3	-	Armour Bane (1), Multiple Shots (2)
Repeater Handbow	12"	3	-	Multiple Shots (2), Quick Shot
Brace of Repeater Handbows	12"	3	-	Multiple Shots (4), Quick Shot
Throwing Weapons	9"	S	-	Multiple Shots (2), Quick Shot Move & Shoot
Javelin	12"	S	-	Move & Shoot, Quick Shot
Sling	18"	3	-	Multiple Shots (2)
Throwing Axe	9"	S+1	-	Quick Shot

OTHER SHOOTING RULES (pg. 143)

Shooting Into Combat

Units cannot shoot into combat (unless otherwise noted).

Shooting With More Than One Rank

Only models in the front rank of a unit shoot, except when:

- **Shooting From A Hill:** A unit shooting from a hill allows for one additional rank to shoot (e.g., front and 2nd rank).
- **Volley Fire:** Units armed with weapons that have the Volley Fire special rule can fire ½ of the models from all ranks after the front rank when shooting (rounding up).

Automatic Hits

Attacks that hit automatically do not require a roll To Hit.

Hits That Inflict Multiple Wounds

A model cannot suffer more wounds than are on its profile (excess wounds are discarded). Attacks that deal multiple wounds do so after rolling To Hit, To Wound, and after making any applicable saves.

Instant Kills

No saves of any kind are allowed against an Instant Kill attack (unless otherwise stated). An Instant Kill attack does not inflict wounds but instead requires the model to be removed as a casualty regardless of the number of wounds on its profile.

4. COMBAT PHASE (pg. 144)

The Combat phase is broken up into several sub-phases:

1. Choose & Fight Combat
2. Calculate Combat Result
3. Break Test
4. Follow Up & Pursuit

CHOOSE & FIGHT COMBAT (pg. 145)

This sub-phase is further broken down into:

- 1.1 Choose Combat & Determine Who Can Fight
- 1.2 Roll To Hit.
- 1.3 Roll To Wound & Make Armour Saves
- 1.4 Remove Casualties

CHOOSE COMBAT & DETERMINE WHO CAN FIGHT (pg. 145)

Models in a 'fighting rank' can fight. Any model that is in base contact with an enemy model fights regardless of position within a unit (including corner-to-corner contact).

The Fighting Rank

Any row of models (rank or file) that has one or more models in base contact with the enemy is a 'fighting rank'. Every model in a fighting rank fights even if not in base contact with the enemy.

Supporting Attacks

Model must be equipped with a weapon that allows them to make a 'supporting attack'. To make a supporting attack a model must be directly behind a friendly model that is in a fighting rank. Supporting attacks cannot be made to the flank or rear, or by models who themselves are in a fighting rank.

How Many Attacks?

This is determined by a models Attacks characteristic and its proximity to the enemy:

- A model in base contact with an enemy model makes attacks equal to the model's Attacks characteristic.
- A model that is not in base contact with an enemy model can only make one attack, regardless of its Attacks characteristic.

Who Strikes First?

A model's Initiative characteristic determines when it fights, starting with the highest down to the lowest Initiative values. Models with the same initiative fight simultaneously. The number of attacks are not reduced by the number of casualties inflicted for models that strike simultaneously.

Charging Units

Every model in a charging unit gains an initiative bonus (up to max 10) for the remainder of the turn in which the unit charges:

- **Charging an enemy in their front arc:** +1 Initiative per full inch moved (prior to making contact), to a max of +3.
- **Charging an enemy in their flank or rear arc:** +1 Initiative per full inch moved (prior to making contact), to a max of +4.

Disordered Charge

Models in a unit that make a disordered charge do not gain an Initiative bonus for charging.

We Can't All Fight!

Models may be removed as casualties before they have their chance to fight:

- **Fallen Warriors:** If a model in the fighting rank is slain by an enemy with a higher Initiative characteristic before it has attacked, it cannot fight (attacks are lost, except for models of the same Initiative that are fighting simultaneously).
- **Stepping Forward:** A model cannot fight during a phase in which it stepped forward into the fighting rank, regardless of its Initiative.

Dividing Attacks & Fighting On Multiple Fronts

A model in base contact with more than one enemy model can divide its attacks between enemies (declare before rolling To Hit). Models in a fighting rank must direct attacks against models in enemy units they are in base contact with. Models not in base contact with an enemy unit will direct their attacks against the closest enemy unit (if equal, attacking player chooses).

ROLL TO HIT (pg. 148)

When a model fights, the number of attacks is determined by the model's Attack characteristic. Make a To Hit roll by rolling 1D6 for each attack. Cross-reference the attacker and target's Weapon Skill characteristic. Each D6 result that is equal to or greater than the target number is a successful hit.

		TARGET'S WEAPON SKILL									
ATTACKER'S WEAPON SKILL		1	2	3	4	5	6	7	8	9	10
	1	4+	4+	5+	5+	5+	5+	5+	5+	5+	5+
	2	3+	4+	4+	4+	5+	5+	5+	5+	5+	5+
	3	2+	3+	4+	4+	4+	4+	5+	5+	5+	5+
	4	2+	3+	3+	4+	4+	4+	4+	4+	5+	5+
	5	2+	2+	3+	3+	4+	4+	4+	4+	4+	4+
	6	2+	2+	3+	3+	3+	4+	4+	4+	4+	4+
	7	2+	2+	2+	3+	3+	3+	4+	4+	4+	4+
	8	2+	2+	2+	3+	3+	3+	3+	4+	4+	4+
	9	2+	2+	2+	2+	3+	3+	3+	3+	4+	4+
	10	2+	2+	2+	2+	3+	3+	3+	3+	3+	4+

Rolls Of A Natural 1 (To Hit)

A natural roll of 1 is always a miss.

Rolls Of A Natural 6 (To Hit)

A natural roll of 6 is always a hit.

ROLL TO WOUND & MAKE ARMOUR SAVES (pg. 149)

Exactly as described for Shooting (see the Shooting section).

REMOVE CASUALTIES (pg. 150)

Casualties are applied as described in the Shooting section. Each unsaved wound causes one wound to be lost by the target unit or model (see pg. 102). A model reduced to zero wounds is removed. Units remove models from the ends of the rear rank, or front rank if only a single rank remains.

Stepping Forward & Closing In

Slain models are considered to have been removed from the ends of the fighting rank (even though models are removed from the rear of the unit).

Set Casualties Aside

Casualties from combat are set apart from the unit (close by) so they can be used for calculating combat resolution.

Excess Casualties

A unit suffering more casualties than it has models in the fighting rank will reduce attacks made by any models with supporting attacks.

Fight On!

After removing casualties check to see if there are any models with a lower Initiative still left to fight in the combat. If there are, repeat steps 1.2, 1.3, and 1.4 for those models. If there are no models left to fight, proceed to the next sub-phase.

CALCULATE COMBAT RESULT (pg. 151)

If one side is completely wiped out, the other side is automatically the winner of the combat. Otherwise, determine the winner by calculating the combat result.

Combat Result Score

Calculate your combat result score based on the table below.

CONDITION	COMBAT RESULT POINTS
Unsaved Wounds	1 point each (from combat and Stand & Shoot)
Rank Bonus	+1 point/rank (limited by troop type)
Standard	+1 point
Battle Standard	+1 point
Flank Attack	+1 point
Rear Attack	+2 point
High Ground	+1 point
Close Order	+1 point (for each unit in close order)
Overkill	+1 point per excess wound from a challenge, up to a max of +5
Other Bonuses	As applicable (magic standards, magic items, special rules, etc.)

Who Is The Winner?

The side that scores the highest combat result score is the winner. The loser must make an immediate 'Break Test'.

Drawn Combat

If both sides have the same combat result score, the side that contains a Musician in one or more of their units will win. If both sides have a Musician, or neither side has a Musician, the combat is a draw. Continue the combat in the next players turn.

Combat Results & Multiple Units In Combat

Calculating combat results in multiple unit combats as follows:

- **Rank Bonus:** Only count the rank bonus for the unit that contributes the highest number of combat result points.
- **Standards:** Only count a single standard, using the standard that grants the higher combat result if applicable.
- **Flank & Rear Attacks:** Can only be counted once per enemy unit engaged, regardless of the number of friendly units engaged with the same enemy unit.
- **High Ground:** The side with a fighting rank in the highest position can claim this bonus. If both sides have fighting ranks at the same height, neither side gains the bonus.
- **Close Order:** Each Close Order unit grants +1 combat result point (cumulative).

BREAK TEST (pg. 154)

To make a Break test, roll 2D6 and modify the result by adding the difference between the winner's and loser's combat result scores. Compare the result to the unit's Leadership characteristic (based on the model with the highest leadership in the unit):

- If the result of the natural roll is higher than the unit's Leadership, the unit 'Breaks' and flees.
- If the result of the natural roll is equal to or lower than the unit's Leadership, but the modified result is higher than the unit's Leadership, the unit 'Falls Back in Good Order'.
- If the modified result is equal to or lower than the unit's Leadership, or if a natural double 1, the unit Gives Ground.

Loser Breaks & Flees

The unit breaks and flees as described in the Flee! section.

Loser Falls Back in Good Order

If the combined unit strength of the winner is double the losing side, the loser will flee. Otherwise, Fall Back in Good Order.

Loser Gives Ground

Move 2" away as described in the Give Ground & Fall Back In Good Order section. The unit moves directly away from all enemy units it is engaged with, breaking base contact. If the unit is surrounded and unable to break contact, treat this like a draw and continue the combat in the next players turn.

FOLLOW UP & PURSUIT (pg. 151)

After Break tests, but before units Give Ground or make a Flee roll, the winner must decide what they will do:

- **Restrain & Reform:** To make a Restraint test, roll 2D6 against the unit's Leadership characteristic. If the test is failed, the unit must either Follow Up or Pursue. If passed, the unit holds position and can make a free reform manoeuvre.
- **Follow Up:** A unit can follow up when the enemy unit Gives Ground. Move the unit into contact with the enemy unit and continue the combat in the next player's turn. Before following up, can do a free turn manoeuvre of 90° or 180°.
- **Pursue:** A unit can pursue an enemy unit that flees or falls back in good order. If there is more than one losing unit, the pursuing unit must declare which unit it will pursue before Flee rolls are made. Once all Flee moves are complete, pursuit moves are made, one at a time, in and order chosen by the controlling player. To pursue, pivot the unit about its center to face directly towards the enemy. Make a Pursuit roll by rolling 2D6. The result is the distance in inches the pursuing unit moves directly towards the unit it is pursuing.

Overrun

If the enemy is destroyed before the Break Test sub-phase, the unit may attempt to restrain and reform, or it may 'overrun'. To overrun, make a pursuit move directly forwards (no pivoting).

Unable To Follow Up Or Pursue

- **Still Engaged:** A unit still in base contact with an enemy unit cannot follow up or pursue.
- **Unable To Move:** If other friendly units or terrain block movement, the unit moves as far as possible then halts.

Catching The Curs!

If the pursuing unit contacts the pursued unit, it halts:

- If the enemy unit is fleeing, it is immediately destroyed. The pursuing unit can attempt to reform (see pg. 129).
- If the enemy unit fell back, the combat continues in the next players turn and the pursuing unit counts as charging.

Pursuit Into An Obstacle

Pursuit moves are affected by terrain normally. A pursuing unit must stop if it contacts a friendly unit or impassable terrain.

Pursuit Off The Battlefield

A unit that moves off the battlefield will move back on from the point it left in the players next Compulsory Moves sub-phase.

Pursuit Into A Fresh Enemy

The pursuing unit counts as charging a freshly encountered enemy unit (the unit being pursued is not caught):

- **Pursuit Into A Fleeing Enemy:** The fleeing unit is immediately removed, and the pursuing unit can attempt to reform.
- **Pursuit Into A New Combat:** Unit counts as charging a new enemy unit encountered. If target is already engaged and combat has not been resolved this turn, pursuing unit fights when the combat is resolved, otherwise combat is resolved in the next players turn. The unit cannot pursue a second time this turn and will automatically reform instead.

OTHER COMBAT RULES (pg. 158)

Assailment Spells

A Wizard engaged in combat can cast Assailment spells in addition to their normal attacks when it is their turn to fight.

Templates

Hits caused by Assailment spells that uses a template are distributed among the rear ranks of the enemy unit and do not reduce the number of models within the fighting rank.

Shrinking Units

If a shrinking unit results in an enemy unit being out of base contact, then move the units by the smallest amount possible to bring them back into base contact.

No More Foes

If a shrinking unit forces a unit out of base contact, the unit ceases to be involved in the combat at the end of the turn.

TERRAIN & COMBAT (pg. 159)

Difficult Terrain

If a unit has 25% or more of its models in difficult terrain at the start of the combat phase it becomes 'disrupted' and can't claim a rank bonus.

Dangerous Terrain & Woods

For the purposes of combat, dangerous terrain and woods are treated as difficult terrain.

Impassable Terrain

If a charging unit cannot align to the charge target, the charging unit has made a 'disordered' charge (no Initiative bonus). If units cannot be aligned after contact has been made (leaving a gap) the charging unit becomes 'disrupted' (no rank bonus).

Linear Obstacles

- **Low Linear Obstacles:** If a unit engaged in combat straddles a low linear obstacle, it becomes 'disrupted'.
- **Defended Low Linear Obstacles:** A unit with its front rank in base contact with a low linear obstacle is defending it. Enemies that charge only need to make base contact with the obstacle to engage the unit. The charging unit becomes 'disrupted' unless it has the **Fly (X)** special rule.
- **High Linear Obstacles:** For the purposes of combat, obstacles 2" high or more are treated as impassable terrain.

Battlefield Decoration

Models in combat ignore small decorative elements of terrain less than 2" across.

THE PSYCHOLOGY OF WAR (pg. 160)

Panic tests are covered in the Remove Casualties & Make Panic Tests section (Shooting phase). In addition to shooting and other possible special rules, units will have to take a Panic test in the following cases:

- **Heavy Casualties:** In a phase other than the Combat phase, if a unit loses more than 25% of the Unit Strength it had at the start of the phase. If failed, the unit flees from the source of the casualties, or from the nearest non-fleeing enemy unit.
- **Nearby Friend Destroyed:** When a Unit Strength 5+ unit is destroyed, friendly units within 6" take a Panic test. If failed, the unit flees the from the nearest non-fleeing enemy unit.
- **Nearby Friend Flees Combat:** When a Unit Strength 5+ unit flees or falls back from combat, friendly units within 6" take a Panic test. If failed, the unit flees the from the nearest non-fleeing enemy unit.
- **Fled Through:** Resolve after being fled through. If failed, the unit flees from the nearest non-fleeing enemy unit.

GIVE GROUND & FALL BACK IN GOOD ORDER (pg. 134)

Give Ground

A unit moves 2" directly away from the enemy unit(s) that caused it to Give Ground, without turning, pivoting, or changing facing. Stop immediately if terrain or another unit is contacted, or if moving would bring it within 1" of an enemy unit.

Fall Back In Good Order

Move exactly like a fleeing unit, with the following exceptions:

- Make the Flee roll using 2D6, discarding the lower result.
- The unit automatically rallies after the flee move.

FLEE! (pg. 132)

A unit can only make a single flee move per phase.

Fleeing From An Enemy Unit

Pivot the fleeing unit to face directly away from the enemy unit (if multiple enemies, the unit with the higher unit strength). After pivoting, move directly away from the enemy unit.

Fleeing As A Compulsory Move

A unit that fails to rally will continue to move straight ahead in the Compulsory Moves sub-phase of the Movement phase.

The Flee Move

A fleeing unit makes a free pivot, then makes a Flee roll using 2D6 to determine how far the unit moves straight ahead. The unit must move the full distance, ignoring all but impassible terrain (take dangerous terrain tests), even if this takes the unit off the edge of the battlefield. A fleeing unit that moves off the battlefield is immediately destroyed. A fleeing unit can only change direction to move around impassible terrain.

Fleeing Through Friendly Units

Fleeing units 'pass through' friendly units (must clear the unit).

Fleeing Through Enemy Units

Take a Peril test for each fleeing model. On a result of 1-3 lose a single wound. On a 4+ there is no effect. Pass through the enemy unit until clear and 1" away from the enemy unit.

REMOVING CASUALTIES (pg. 102)

Casualties are removed from the back rank, either from left-to-right or right-to-left. Although removed from the back rank, the casualties are from the fighting rank. Models that step forward into the fighting rank cannot make any form of attack. Single rank formations remove casualties from either end of the rank.

SKIRMISHERS (pg. 184)

Coherency

A skirmishing unit is a loose but contiguous group in which every model is within 1" of another model belonging to the same unit. A skirmishing unit must end its movement as a coherent unit (per the 1" apart rule). When removing casualties, you cannot remove a model that would result in the unit losing coherency – a different model must be removed instead. If a unit of skirmishers loses coherency, models must be removed from play as casualties until a single coherent group remains.

Facing & LOS

Skirmishers do not have flank or rear arcs and instead have 360° vision arc. The unit can declare charges and shoot in any direction. Other units can see through skirmishers if LOS can be drawn between the individual models (individual models block LOS as normal).

Movement & Manoeuvre

Each model moves freely in any direction (no manoeuvres, only to adopt a different formation). Other units can't move through units of skirmishers or the gaps between skirmishing models.

SKIRMISHERS (Continued) (pg. 184)**Skirmisher Reinforcements**

When entering, are placed within 1" of the battlefield edge.

Skirmishers & Shooting

Can shoot in any direction. Models block LOS as normal, including for other models in the same unit.

- **Enemy Fire:** -1 To Hit modifier when shooting at a unit of skirmishers consisting entirely of Unit Strength 1 models.

Skirmishers & Panic

Skirmishers do not cause Panic when fleeing through formed friendly units of any type.

Skirmishers & Combat

In combat, adopt a closed formation until the combat is over.

- **Rank Bonus:** Cannot claim a rank bonus, even when formed.
- **Disruption:** Enemy units engaged in the flank/rear by skirmishers do not become disrupted.

Characters Joining Skirmishers

Can only join a unit of skirmishers if of the same troop type.

Skirmishers & Charging

Charge normally. Move each model, starting with the closest to the charge target. Move models into base-to-base and corner contact to form a fighting rank. Models that cannot make base contact form complete ranks behind the fighting rank.

Formed Units Charging Skirmishers

Move directly to contact with the closest skirmisher. Do not wheel to align. Skirmishers move up to Movement characteristic into base contact. If unable to contact (insufficient movement or no way to make base contact), form up behind the fighting rank.

Skirmishers Charging Skirmishers

Move closest charging model into base contact. All remaining models move to form a fighting rank (keep first model in center, forming to the left/right of it). Models that cannot move into the fighting rank form up behind it. Once complete, skirmishers in the charged unit move up to their Movement characteristic into base contact. If unable to contact (insufficient movement or no way to make base contact), form up behind the fighting rank.

CHARACTERS (pg. 202)**Command Range**

A character's Command range is equal to their Leadership characteristic in inches.

**General & Battle Standard**

Each have a Command range of 12" regardless of their Leadership characteristic. If they have the Large Target special rule, this is increased to 18".

The General

The army general has the following:

- **Inspiring Presence:** All friendly units in Command range can use the General's Leadership characteristic.

The Battle Standard

Has the following:

- **Combat Result Bonus:** Grants +1 CR bonus, even if another standard is present (if two battle standards are present, you can only count one).
- **"Hold Your Ground":** If not fleeing, friendly units within Command range may reroll any failed Panic or Rally test. Additionally, may reroll the result of a Break test, but you must accept the result of the reroll (even if a worse result).

Lone Characters

Any character of the type infantry or cavalry that is not in a unit is considered a lone character. A lone character is always considered to be in Skirmish formation.

Evade

Unless fleeing or engaged in combat, if a character would be contacted by an enemy unit that is making a pursuit move, the character can make an Initiative test. If passed, they can move up to their Movement characteristic away from any enemy units (can't move closer to enemy units). After movement, the enemy completes the pursuit move.

Targeting Lone Characters

Can't be targeted by shooting/spells if within 3" of a friendly unit of 5+ models of the same troop type, unless the closest target.

Joining and Leaving A Unit

Characters may join a unit during deployment, or during the Remaining Moves sub-phase, by moving into base contact with a unit that is not engaged in combat or fleeing. A unit cannot move after being joined by a character during the Remaining Moves sub-phase, but only counts as having moved if it had moved prior to the character joining the unit. Can leave a unit (if the unit is able to move) during the Remaining Moves sub-phase.

Fleeing Units

A character flees with a unit it has joined if the unit flees.

Characters & Shooting

A character and unit armed with missile weapons must shoot at the same target. A character can cast Magic Missiles and Magical Vortex spells at separate targets.

Enemy Shooting

A character in a unit cannot be hit by enemy shooting unless:

- They are specifically targeted by an attack.
- They are underneath a template attack.
- There are fewer than 5 rank and file models in the unit (divide hits equally among the remaining models).

"Look Out, Sir!"

If hit by a shooting attack, and if there are 5+ rank and file models in the unit, roll a D6. On a 1 the character is hit. On a 2+ a rank and file model is hit instead.

Characters In Combat

In combat, a character in a unit:

- If not in the fighting rank, during step 1.1 of Choose Combat & Fight sub-phase, starting with characters belonging to the inactive player, move through the unit into the fighting rank.
- Can divide attacks against models in base contact.
- Can only be hit by attacks from enemy models (including Impact Hits and Stomp Attacks) that are in base contact.
- Can be hit by Impact Hits or Stomp Attacks if there are fewer than five rank and file models in the character's unit.
- If adjacent to the fighting rank are considered to be within it.

Too Many Characters

Unless a unit is only a single rank, the fighting rank cannot have more characters than rank and file models. Additional characters must retire from the fighting rank. To retire, move the character away from the fighting rank to another position in the unit. They cannot make attacks or have attacks directed against them. The unit cannot benefit from any special rules, Leadership, or other benefits the character could provide.

Excess Wounds

Wounds on a unit never spill over to characters or vice versa.

CHALLENGES (pg. 210)**Issuing A Challenge**

Issued during Step 1.1 of the Choose Combat & Fight sub-phase. Only one challenge can be issued per combat, starting with the active player. The nominated character must be in the fighting rank or adjacent to it.

Accepting A Challenge

Only a character or champion within, or adjacent to (pg. 209), the fighting rank can accept a challenge.

Challenges & Mounts

Mounts must attack the opposing character in a challenge, even if the character is slain before they attack (for overkill).

Refusing A Challenge

If refused, the issuing player can nominate one enemy character or champion to retire from combat just as described under the Too Many Characters section. Once retired, the character or champion cannot return to the fighting rank until the unit is no longer in combat with the enemy unit that issued the challenge.

Nowhere To Run

A challenge cannot be refused by a character or champion if:

- They are not part of a unit or are the last remaining model.
- They are part of a unit engaged in all four arcs (surrounded).

WAR MACHINES (pg. 223)**Black Powder & Stone Thrower Misfire Table**

D6	RESULT
1	Destroyed: The model is destroyed and immediately removed from play.
2-4	Malfunction: The crew immediately loses one wound. The model does not shoot this turn or in it's next turn.
5-6	Pffft or Twang: The model does not shoot this turn.

Bolt Throwers

WEAPON	RANGE	S	AP	SPECIAL RULES
Bolt Thrower	48"	6	-3	Cumbersome, Move or Shoot, Multiple Wounds (2), Through & Through
Repeater Bolt Thrower	48"	6	-3	Cumbersome, Move or Shoot, Multiple Wounds (2), Rapid Fire, Through & Through

- **Through & Through:** If the target is a formed unit of any type and if the roll To Hit is successful, the shot causes:
 - One hit per rank (including incomplete rear ranks) if the bolt thrower is in the target's front or rear arc.
 - One hit per file if the bolt thrower is in the target's flank arc.

Apply a -1 modifier to the Strength characteristic of the shot for each hit after the first (stop if Strength is reduced to 0).

- **Rapid Fire:** Can choose to fire normally or 'rapid fire'. If using 'rapid fire', all shots must be against the same target.

TYPE	RANGE	S	AP	SPECIAL RULES
Rapid Fire	48"	4	-1	Armour Bane (1), Cumbersome, Move or Shoot, Multiple Shots (D3+3)

Mortars

This weapon does not use the crew's BS, instead it shoots using the Bombardment special rule. Use the 5" blast template and Black Powder Misfire table. **Multiple Wounds (D3+1)** only applies to the model that is hit under the central hole of the template.

WEAPON	RANGE	S	AP	SPECIAL RULES
Mortar	12-48"	2 (6)	-2 (-3)	Armour Bane (1), Bombardment, Cumbersome, Move or Shoot, Multiple Wounds (D3)

- **Bombardment:** Shoot by following these steps:

1. **Choose Target:** An enemy unit in LOS and in range (min/max). Place the blast template over the center of the target unit.
2. **Scatter:** Roll an artillery and scatter die. If a 'Misfire' is rolled, immediately roll on the Misfire table. If a 'Hit!' is rolled, ignore the artillery die result. If an arrow is rolled, move the template that direction in inches equal to the artillery die.
3. **Damage:** Models fully under the template are automatically hit. If the base is partially covered, the model is hit on a D6 result of 4+. A model hit under the central hole (one model only) suffers a hit using the Strength and AP noted in brackets. All other hits are resolved using the normal Strength and AP characteristics.

Fighting A Challenge

Models in a challenge can only attack each other and cannot be attacked by other models in the units engaged in the combat.

Overkill

If the opposing character is slain in combat, a CR bonus of +1 can be claimed for each excess wound, up to a maximum of +5.

To The Death!

A challenge will continue until one of the combatants is slain, including across multiple rounds of combat.

VICTORY POINTS (pg. 210)**Dead or Fled**

- Each enemy unit destroyed or fled off the battlefield is worth VPs equal to the unit points.
- Each fleeing enemy unit is worth VPs equal to 50% of the unit points (round up).
- Each enemy unit reduced to 25% of starting Unit Strength is worth VPs equal to 25% of the unit points (round up).

The King is Dead

Enemy general slain or fled off battlefield is worth 100 VPs.

Trophies of War

50 VPs for each enemy standard captured, plus another 50 VPs awarded if the Battle Standard is slain, fled off battlefield, or fleeing at the end of the game.

Scenario Objectives & Special Features

Points are awarded as determined by the scenario.

WEAPON	RANGE	S	AP	SPECIAL RULES
Organ Gun	30"	5	-1	Armour Bane (2), Cumbersome, Move or Shoot, Multi-Barrelled

Multi-Barrelled: When shooting with this weapon, roll two Artillery dice before making any rolls To Hit. The number of shots fired is equal to the total of both Artillery dice:

- If a 'Misfire' is rolled on one of the Artillery dice, all shots fired this turn suffer an additional -1 To Hit modifier.
- If a 'Misfire' is rolled on both Artillery dice, no shots are fired. Roll immediately on the Black Powder Misfire table.

After determining the number of shots, roll To Hit for each normally, using the crew's Ballistic Skill and applying shooting modifiers.

Cannon

WEAPON	RANGE	S	AP	SPECIAL RULES
Cannon	48"	8	-2	Armour Bane (2), Cannon Fire, Cumbersome, Move or Shoot, Multiple Wounds (D3)
Great Cannon	60"	10	-3	Armour Bane (2), Cannon Fire, Cumbersome, Move or Shoot, Multiple Wounds (D3+1)

- **Cannon Fire:** Shoot by following these steps:
 1. **Choose Target Point:** Choose a point (does not have to be an enemy model) in LOS and maximum range and mark it.
 2. **Fire:** Roll the Artillery die. If a 'Misfire' is rolled, immediately roll on the Black Powder Misfire table. If a number is rolled, move the marked point that many inches directly away from the cannon to determine the 'strike point' of the cannonball.
 3. **Bounce:** If a misfire was not rolled, determine how far the cannonball bounces from the 'strike point' by rolling the Artillery die. If a 'Misfire' is rolled, the cannonball does not bounce. If a number is rolled, the cannonball bounces that many inches directly away from the cannon.
 4. **Determine Hits:** Any model whose base lies under the strike point or anywhere along the bounce path is automatically hit. If the target is a formed unit, the number of models hit is limited to one per rank or one per file.
 5. **Crunch:** If the cannonball hits a target that is a Monstrous Creature or Behemoth, or if it hits impassable terrain or a high linear obstacle, it stops immediately. No further models are hit.
- **Grapeshot:** Instead of firing normally, the crew can choose to fire grapeshot using the **Needs More Nails** special rule.

TYPE	RANGE	S	AP	SPECIAL RULES
Grapeshot	12"	4	-1	Cumbersome, Move or Shoot, Needs More Nails

- **Needs More Nails:** Check range and declare a target normally, then roll the Artillery die. If a 'Misfire' is rolled, immediately roll on the Black Powder Misfire table. If a number is rolled, the target unit suffers that many automatic hits.

Stone Throwers

This weapon does not use the crew's BS, instead it shoots using the Bombardment special rule. Use the 3" blast template and Stone Thrower Misfire table. **Multiple Wounds (D3+1)** only applies to the model that is hit under the central hole of the template.

WEAPON	RANGE	S	AP	SPECIAL RULES
Stone Thrower	12-60"	4 (8)	-1 (-3)	Bombardment, Cumbersome, Move or Shoot, Multiple Wounds (D3+1)

- **Bombardment:** Shoot by following these steps:
 1. **Choose Target:** An enemy unit in LOS and in range (min/max). Place the blast template over the center of the target unit.
 2. **Scatter:** Roll an artillery and scatter die. If a 'Misfire' is rolled, immediately roll on the Misfire table. If a 'Hit!' is rolled, ignore the artillery die result. If an arrow is rolled, move the template that direction in inches equal to the artillery die.
 3. **Damage:** Models fully under the template are automatically hit. If the base is partially covered, the model is hit on a D6 result of 4+. A model hit under the central hole (one model only) suffers a hit using the Strength and AP noted in brackets. All other hits are resolved using the normal Strength and AP characteristics.
- **Indirect Fire:** Can declare a shot will be indirect if there is no LOS to the target unit. When rolling to see if the shot scatters, resolve the arrow normally. If a 'Hit!' is rolled, scatter in the direction of the small arrow a number of inches equal to the result of the artillery die minus the BS of the crew (to a minimum of 0).

Fire Throwers

This weapon does not use the crew's BS, instead it shoots using the **Column of Fire** special rule.

WEAPON	RANGE	S	AP	SPECIAL RULES
Fire Thrower	12"	5	-1	Column of Fire, Cumbersome, Flaming Attacks, Move or Shoot

Column of Fire: When shooting with this weapon, place the flame template, broad end towards the target, narrow end touching the shooters base edge anywhere along its front arc. The template can then be moved directly away from the shooter up to the maximum range from the narrow end of the template. Once placed, roll the Artillery die:

- If a 'Misfire' is rolled, immediately roll on the Black Powder Misfire Table.
- If a number is rolled, move the template that many inches directly away from the shooter. Any model covered by the template (after moving it) is hit automatically. Models partially covered are hit on a D6 result of 4+.

TROOP TYPES & UNIT STRENGTH (pg. 105, 190)

TROOP TYPE	MODELS PER RANK	MAXIMUM RANK BONUS	UNIT STRENGTH PER MODEL
Regular Infantry	5	+2	1
Heavy Infantry	4	+2	1

Steady in the Ranks: When in Close or Open Order formation, this unit does not become 'disrupted' when engaged in its flank or rear unless the enemy unit has a Unit Strength of 10+.

Monstruous Infantry	3	+2	3
----------------------------	---	----	---

Clumsy: Unit can only be joined by a character that also has this rule.

Swarms	-	-	3
---------------	---	---	---

Insignificant: LOS can be drawn across a swarm as if it isn't there. Swarms are ignored when targeting enemy characters.
No One Cares: Swarms never cause Panic in friendly units.
Undisciplined: This unit cannot use the Inspiring Presence (Army General) or Hold Your Ground (Battle Standard Bearer) rules.

Light Cavalry	5	+1	2
----------------------	---	----	---

Split Profile (Cavalry): The following applies to models in this unit:

- Unless otherwise noted, special rules that apply to either element (rider or mount) apply to the other as well.
- Rider and mount each use their own Weapon Skill, Ballistic Skill, Strength, Initiative, Attacks, and their own weapons.
- In combat, enemy rolls To Hit are made against the Rider's Weapon Skill.
- Impact Hits and/or Stomp Attacks use the mount's Strength.
- When this model makes an Armour Save, it uses the rider's armour value.
- If the rider is reduced to 0 wounds, the entire model is removed from play.

Cavalry Support: If a cavalry model makes a supporting attack, only the rider can attack, not the mount.

Heavy Cavalry	4	+1	2
----------------------	---	----	---

Split Profile (Cavalry): Same as Light Cavalry.

Cavalry Support: If a cavalry model makes a supporting attack, only the rider can attack, not the mount.

Monstrous Cavalry	3	+1	3
--------------------------	---	----	---

Split Profile (Cavalry): Same as Light Cavalry.

Clumsy: Unit can only be joined by a character that also has this rule.

War Beasts	5	+1	1
-------------------	---	----	---

Undisciplined: This unit cannot use the Inspiring Presence (Army General) or Hold Your Ground (Battle Standard Bearer) rules.

Light Chariots	3	+1	3
-----------------------	---	----	---

Split Profile (Chariots): The following applies to models in this unit:

- Unless otherwise noted, special rules that apply to either element (chariot, crew, or beasts) apply to the others as well.
- This model uses the Movement characteristic of the beasts that draw it or, if there are no beasts, the chariot itself.
- The crew and beasts each use their own Weapons Skill, Ballistic Skill, Strength, Initiative, Attacks, and their own weapons.
- In combat, all enemy roll To Hit are made against the crew's Weapon Skill.
- Impact Hits and/or Stomp Attacks use the chariot's Strength.
- If the chariot is reduced to 0 wounds, the entire model is removed from play.

Iron Shod Wheels: This model treats all difficult terrain as dangerous terrain and treats all linear obstacles as impassible terrain.

If this model rolls a 1 when making a Dangerous Terrain test, it loses D3 wounds.

Churning Wheels: This unit can only be joined by a character that also has this rule.

Firing Platform: For the purposes of shooting and casting spells, this model has a 360° vision arc.

Heavy Chariots	-	-	5
-----------------------	---	---	---

Split Profile (Chariots): Same as Light Chariots.

Scythed Wheels: Any Impact Hits caused by a heavy chariot have an Armour Piercing characteristic of -2.

Lumbering: This model is, and follows all the rules for, a Close Order formation, even when a single model. After moving, unless it charged, marched, or fled, this model may pivot about its center to change facing by up to 90°.

Iron Shot Wheels: Same as Light Chariots.

Firing Platform: Same as Light Chariots.

Monstrous Creatures	-	-	As Starting Wounds
----------------------------	---	---	--------------------

Ridden Monster: Some characters can ride monstrous creatures – see the characters entry for more information.

Lumbering: This model is, and follows all the rules for, a Close Order formation, even when a single model. After moving, unless it charged, marched, or fled, this model may pivot about its center to change facing by up to 90°.

TROOP TYPE	MODELS PER RANK	MAXIMUM RANK BONUS	UNIT STRENGTH PER MODEL
Behemoths	-	-	As Starting Wounds
Ridden Monster: Some characters can ride a behemoth – see the characters entry for more information.			
Lumbering: This model is, and follows all the rules for, a Close Order formation, even when a single model. After moving, unless it charged, marched, or fled, this model may pivot about its center to change facing by up to 90°.			
Thunderstomp: Any Stomp Attacks made by this model have an Armour Piercing characteristic of -2. This rule cannot be used against another monster (Monstrous Creature or Behemoth).			

War Machines	-	-	As Starting Wounds
--------------	---	---	--------------------

- Split Profile (War Machine):** The following applies to models in this unit:
- Unless otherwise noted, this model is treated as a single model and special rules that apply to either element (war machine or crew) apply to the other as well.
 - In combat, use the Toughness and Wounds characteristics of the war machine.
 - For each Wound the crew loses, it suffers a -1 modifier to its Attacks characteristic.
 - When this model make an Armour Save roll, it uses the crew’s armour value.
 - If the crew of the war machine is reduced to 0 wounds, the entire model is removed from play.

“We’re Not Paid Enough To Fight”: If a war machine ever Breaks and flees from combat, treat the model as having been destroyed and remove it from play. A war machine that loses a round of combat may Fall Back in Good Order or Give Ground.

Weapon of War: War machines cannot march, declare a charge, or make a pursuit move. War machines suffer a -1 modifier to the result of any Flee roll they make (to a minimum of 1). A war machine can pivot freely at any time during its turn and may make a follow up move as normal. If a war machine pivots, it does not count as having moved.

Character – Cavalry Mount	N/A	N/A	See Below
---------------------------	-----	-----	-----------

- Characters & Cavalry Mounts:** The Character is treated as being of the mount’s sub-category of troop type.
- Split Profile (Cavalry Character):** The following applies to the Character:
- When moving, this model uses the Movement characteristic of the mount.
 - Unless otherwise noted, special rules that apply to either element (Character or mount) apply to the other as well.
 - Character and mount each use their own Weapon Skill, Ballistic Skill, Strength, Initiative, Attacks, and their own weapons.
 - In combat, enemy rolls To Hit are made against the Character’s Weapon Skill.
 - Impact Hits and/or Stomp Attacks use the mount’s Strength.
 - When this model makes an Armour Save, it uses the Character’s armour value.
 - If the Character is reduced to 0 wounds, the entire model is removed from play.
- Improved Characteristics:** Cavalry mounts, when noted in the mount’s profile, increase the Toughness and/or Wounds characteristics of the character.

Character – Ridden Monster	N/A	N/A	See Below
----------------------------	-----	-----	-----------

- Characters & Ridden Monsters:** The Character is treated as being of the mount’s sub-category of troop type.
- Split Profile (Ridden Monster Character):** The following applies to the Character:
- When moving, this model uses the Movement characteristic of the mount.
 - Unless otherwise noted, special rules that apply to either element (character or mount) apply to the other as well.
 - Character and mount each use their own Weapon Skill, Ballistic Skill, Strength, Initiative, Attacks, and their own weapons.
 - In combat, enemy rolls To Hit are made against the Character’s Weapon Skill.
 - Impact Hits and/or Stomp Attacks use the mount’s Strength.
 - When this model makes an Armour Save, it uses either the mount or Character’s armour value, whichever is better.
 - If the Character is reduced to 0 wounds, the entire model is removed from play.
- Improved Characteristics:** Ridden monsters, when noted in the mount’s profile, increase the Toughness and/or Wounds characteristics of the character.

Character – Chariot Mount	N/A	N/A	See Below
---------------------------	-----	-----	-----------

- Characters & Chariot Mounts:** The Character is treated as being of the chariot’s sub-category of troop type.
- Split Profile (Chariot Character):** The following applies to the Character:
- Unless otherwise noted, special rules that apply to either element (Character, chariot, crew, or beasts) apply to the others as well.
 - This model uses the Movement characteristic of the beasts that draw it or, if there are no beasts, the chariot itself.
 - The Character, crew and beasts each use their own Weapons Skill, Ballistic Skill, Strength, Initiative, Attacks, and their own weapons.
 - In combat, all enemy rolls To Hit are made against the Character’s Weapon Skill.
 - Impact Hits and/or Stomp Attacks use the chariot’s Strength.
 - Enemy rolls To Wound are made against either the chariot or the Character’s Toughness, whichever is the highest.
 - When this model makes an Armour Save, it uses either the chariot or Character’s armour value, whichever is better.
 - If the chariot is reduced to 0 wounds, the entire model is removed from play.
- Improved Characteristics:** The Wounds characteristic of the Character is added to the chariot’s Wounds characteristic.

UNIVERSAL SPECIAL RULES (PAGE 1) (pg. 166)

AMBUSHERS: Unit may be held in reserve (and not deployed at the start of the game). Starting in round 2, roll a D6 in your Start of Turn sub-phase for each unit of Ambushers held in reserve. On a 1-3 result, the unit is delayed. On a 4-6 result, the unit arrives, entering the battle as reinforcements during the Compulsory Moves sub-phase. The unit may be placed on any table edge, chosen by the controlling player, but cannot be placed within 8" of an enemy model. If any Ambushers are still held in reserve at the start of round 5, they automatically arrive.

ARMOUR BANE (X): If a natural 6 is rolled when making a roll To Wound, the AP characteristic of its weapon is improved by the amount shown in brackets after the name of this special rule.

ARMoured HIDE (X): Improves armour value of the model by 'X'.

BREATH WEAPON: Can be used once per round during the models Shooting Phase. Place the flame template, broad end over target, narrow end touching the shooters base edge anywhere along its front arc. The template must lie entirely in the model's vision arc. Any model completely under the template is automatically hit. Models partially under the template are hit on a D6 roll of 4+. See model's rules for Strength and special rules of the breath weapon.

CHARIOT RUNNERS: Friendly models whose type is 'chariot' can draw LOS over or through models, and can move through, friendly units in Skirmish formation (if majority of the models have this special rule). If the chariot's move would result in it ending up 'on top' of a Chariot Runner, move the Chariot Runner aside to make space. While in Skirmish formation, units of Chariot Runners can treat friendly chariots that are within 1" of one or more of the unit's models as a part of the unit for purposes of unit coherency.

CLOSE ORDER: Unit may adopt a Close Order formation.

COUNTER CHARGE: Can only be used if all models in unit have this special rule. When unit is charged in its front arc by an enemy unit whose troop type is cavalry, chariot or monster, it may declare a 'Counter Charge' charge reaction: Measure the distance between the two units. If the distance is less than the Movement characteristic of the charging unit, the charged unit must either Hold or Flee instead. Otherwise, pivot the unit about its center so that it is facing directly towards the center of the charging enemy unit. After pivoting, the unit moves D3+1" directly towards the enemy unit. Both units are considered to have charged during this turn. Fleeing units and units already engaged in combat when charged cannot Counter Charge. A unit can only Counter Charge in response to one charge per turn, even if charged by multiple units. Once all charges have been declared, the inactive player can choose which charging unit (if multiple) to Counter Charge. The unit will Hold against the other charging units (no charge bonus).

CUMBERSOME: Weapon cannot be used when making a Stand & Shoot charge reaction.

DETACHMENT: Unit can be fielded as a 'detachment'.

DRAgGED ALONG: Model that begins its movement within 1" of a friendly unit whose troop type is 'infantry', that is not fleeing and contains ten or more models, may replace its Movement value with that of the friendly infantry unit.

DRILLED: Unless it is fleeing, a Drilled unit may perform a free redress the ranks maneuver immediately before moving. Once complete, the unit moves as normal. A Drilled unit can march when within 8" of an enemy unit without taking a Leadership test. Any character that joins a Drilled unit is considered Drilled as well.

ETHEREAL: Ethereal creatures treat all terrain as open ground for movement. They cannot end their movement inside impassible terrain, though they can pass through it. In addition, Ethereal creatures can only be wounded by Magical attacks. Characters that are not Ethereal cannot join units that are, and vice versa.

EVASIVE: Once per turn, when this unit is declared the target during the enemy Shooting phase, it may choose to Fall Back in Good Order, falling back directly away from the enemy unit shooting at it. Once this unit has completed its move, the enemy unit may continue with its shooting as declared.

EXTRA ATTACKS (+X): Modifies the Attacks characteristic of the model by '+X'. If determined by the roll of a dice, roll when the model's combat is chosen during the Choose & Fight Combat sub-phase.

FAST CAVALRY: When all models in a unit are in Open Order formation (including characters), the unit may perform a Quick Turn (pivot about its center to change its facing by up to 90°) even if it marched.

FEAR: Models with this special rule cause Fear.

- If a unit declares a charge against an enemy unit that causes Fear and has a higher Unit Strength, it must first make a Leadership test. If the test is failed, the unit cannot charge. It does not move and is considered to have made a failed charge. If the test is passed, the unit can charge as normal.
- If a unit is engaged with an enemy unit that causes Fear and has a higher Unit Strength, it must make a Leadership test during any Choose & Fight Combat sub-phase. If the test is failed, any models in the unit that direct their attacks against the Fear causing enemy suffer a -1 To Hit modifier.

A unit only needs to make one Fear test per turn. Models that cause Fear are immune to Fear. A unit that does not cause Fear does not become immune to Fear when joined by a character that is immune to Fear.

FEIGNED FLIGHT: When this unit chooses to Flee (or Fire & Flee) as a charge reaction, it automatically rallies at the end of its move.

FIGHT IN EXTRA RANK: Models may make a supporting attack.

FIRE & FLEE: Units armed with missile weapons (majority of models) may declare 'Fire & Flee' as a charge reaction.

- If a unit with this special rule is armed with missile weapons and can draw line of sight to the charging unit, it may declare Fire & Flee. The unit will Stand & Shoot (see pg. 120) before fleeing the charge. However, when making its Flee roll the unit rolls two D6 and discards the lowest result.

Unit cannot Fire & Flee if the charging unit is within its Movement characteristic value (must Hold or Flee instead).

FIRST CHARGE: If this unit's first charge of the game is successful (i.e., contacts the charge target), the charge target becomes 'disrupted' until the end of the Combat phase of that turn.

FLAMING ATTACKS: Any attack made, or hits caused by this model or made using a weapon or spell with this special rule, is a 'Flaming' attack. This model causes Fear in models whose troop type is 'war beasts' or 'swarms'. Unless otherwise stated, this model makes Flaming attacks during shooting and combat. Does not affect spells or magic weapons.

FLAMMABLE: Cannot make a Regeneration save against a wound caused by a Flaming attack.

FLY (X): Model can Fly. Flying models choose to move normally on the ground (using their Movement characteristic), or to fly. Distance a model can fly will be shown in brackets after the name of this special rule. Models that choose to move by flying:

- May move as normal (i.e., they may charge, march and maneuver as if moving on the ground), except that they are able to pass freely above other models, units and terrain features without any penalty, and they can march whilst within 8" of an enemy unit without first having to make a Leadership test.
- May end their movement in terrain but will suffer its effects if they do. They cannot end their movement 'on top' of impassable terrain or another unit, or within 1" of an enemy unit.

Models that can Fly must begin and end all their movement on the ground. A character with this special rule cannot join a unit without this special rule, and vice versa.

FRENZY: A frenzied model has +1 Attacks. Does not apply to the model's mount, beasts drawing chariots, or to a monster's rider.

- If the majority of the models are Frenzied, the unit automatically passes any Fear, Panic, or Terror tests.
- If a unit has one or more Frenzied models and can declare a charge during the Declare Charges & Charge Reactions sub-phase of its turn, it must do so.
- If the majority of the models are Frenzied, can't choose to Flee as a charge reaction, and can never make a Restraint test.

Frenzy can be lost during a game. Any model that loses a round of combat will immediately lose this special rule.

FURIOUS CHARGE: If charging 3" or more, model gains +1 Attacks.

HATRED (X): Model may reroll any failed To Hit roll against a hated enemy (specified by 'X') in the first round of combat.

HORDE: This unit may increase its maximum Rank Bonus by one.

HOWDAH: A unit with this special rule has a split profile and follows both the 'Split Profile (Chariots)' and 'Firing Platform' rules (see pg. 194). In all other respects, this model is a behemoth.

IGNORES COVER: When making a shooting attack, ignore any To Hit modifiers caused by partial or full cover.

IMMUNE TO PSYCHOLOGY: If the majority of the models are Immune to Psychology, the unit automatically passes any Fear, Panic, or Terror tests. The unit cannot choose to Flee as a charge reaction. Does not make the unit immune to other Leadership tests.

IMPACT HITS (X): The number of impact hits is shown in brackets.

- **Resolving Impact Hits:** Can only be made by a charging model that moved 3" or more and is in base contact with the enemy. Impact hits are attacks made in combat with Initiative 10 (regardless of modifiers) and hit automatically using the unmodified Strength value of the model.

IMPETUOUS: If during the Declare Charges & Charge Reactions sub-phase of its turn, a unit with one or more Impetuous models can declare a charge, roll of D6. On a roll of 1-3, the unit must declare a charge. On a roll of 4+, the unit may act as normal.

INSPIRING PRESENCE: All friendly units in Command range can use this models Leadership characteristic instead of their own.

KILLING BLOW: If the model rolls a natural 6 on a To Wound roll in combat, it causes a 'Killing Blow'. Enemy models whose troop type is 'infantry' or 'cavalry' get no armour or Regeneration saves. Ward saves are not affected. If an enemy model whose troop type is 'infantry' or 'cavalry' suffers an unsaved wound from Killing Blow, it loses all remaining Wounds. Cannot be used if an attack automatically wounds the target.

LARGE TARGET: When shooting at a Large Target, enemy models do not suffer To Hit modifiers for partial or full cover. A model can draw LOS to Large Targets over or through other models, and vice versa.

LEVIES: Cannot use the Inspiring Presence rule of the army's General nor the Hold your Ground rule of a Battle Standard. Friendly models without the Levies special rule do not make a Panic test when a friendly unit of Levies breaks from combat.

LONER: Character cannot be your General and cannot join a unit that does not also have this special rule. A unit with this special rule cannot be joined by a character without this special rule.

MAGICAL ATTACKS: Any attack made or hit caused by this model, or made using a weapon with this special rule, is a 'Magical' attack. All spells are considered to have this special rule, as are any hits caused by a magic weapon.

MERCENARIES: Units from another army list included in your army gain this special rule. Mercenaries cannot use the Inspiring Presence rule nor the Hold the Ground rule. Mercenaries cannot be joined by characters from another army list.

MONSTER HANDLERS: This monster is accompanied by one or more models representing its handlers. During deployment, position these models anywhere that is adjacent to, and in base contact with, the monster. If the handlers are found to be blocking movement or line of sight, move them aside. In combat, each handler adds its attacks to those of the monster. If the monster suffers an unsaved wound, roll a D6. On a roll of 1-4 the monster loses a Wound, but on a roll of 5+ a handler model suffers the wound instead. If the monster is removed from play, so are all its handlers.

MONSTER SLAYER: If model rolls a natural 6 when making a roll To Wound for an attack made in combat, it strikes a 'Monster Slaying Blow'. Enemy models whose troop type is 'monster' are not permitted and armour or Regeneration save. Ward saves are not affected. When an enemy model whose troop type is 'monster' suffers an unsaved wound from a Monster Slaying Blow, it loses all remaining Wounds. If an attack wounds automatically, this special rule cannot be used.

UNIVERSAL SPECIAL RULES (PAGE 3) (pg. 166)

MOTLEY CREW: Unit includes models of the same type that are equipped differently, and/or models of different types.

- **Different Weapons:** The fighting rank of a Motley Crew may contain models that are armed with different weapons. The controlling player must roll for each of the different models. Attacks are made in the Initiative order of the models.
- **Different Armour:** Models may have different armour values. In combat and against enemy shooting, use the armour value of the majority of the models in the fighting rank. Against shooting, use the armour value of the majority of models in the unit.
- **Casualty Removal:** Against enemy shooting, casualty removal should be evenly divided between the different models in the unit. In combat, casualties should be removed from among the majority of the models in the fighting rank. In either case, available models are brought forward from rear ranks to fill any gaps, as chosen by the controlling player.

MOVE & SHOOT: Weapon can be used in the Shooting phase even if the model marched this turn.

MOVE OR SHOOT: Weapon cannot be used in the Shooting phase if the model moved for any reason this turn (including if it rallied this turn).

MOVE THROUGH COVER: Models do not suffer any Movement modifiers for moving through difficult or dangerous terrain. Models may reroll any roll of 1 when making a Dangerous Terrain test.

MULTIPLE SHOTS (X): Weapon can fire a single shot, or it can be fired a number of times, as shown in the brackets. If multiple shots are fired, all rolls To Hit suffer a -1 To Hit modifier. All models in a unit equipped with Multiple Shot weapons must fire either a single or Multiple Shots. Where the number of Multiple Shots is generated by a dice roll, roll separately for each model.

MULTIPLE WOUNDS (X): Each unsaved wound (after armour, Regeneration, and Ward saves if applicable) inflicted by an attack is multiplied by the number shown in brackets. Where the number of Multiple Wounds is generated by a dice roll, roll separately for each unsaved wound.

OPEN ORDER: Unit may adopt an Open Order formation.

POISONED ATTACKS: If model rolls a natural 6 To Hit, the hit will wound automatically. Unless otherwise stated, the model may use it for both shooting and combat attacks. Any spells cast by the model are unaffected, as are any attacks made with magic weapons. Does not apply if an attack needs a To Hit roll of 7+, or hits automatically.

PONDEROUS: Suffers a -2 To Hit modifier when Moving and Shooting.

QUICK SHOT: Weapon does not suffer the -1 To Hit modifier for Moving and Shooting. Unit can make a Stand & Shoot charge reaction regardless of how close the charging unit is.

QUICK TURN: After moving, unless it charged, marched, or fled, the unit may pivot about its center to change it's facing up to 90°.

RALLYING CRY: During the Command sub-phase of their turn, if they are not engaged in combat, this character may nominate a single fleeing friendly unit that is within their Command range. The unit immediately makes a Rally test. If this test is failed, the unit may attempt to rally again as normal during the Rally sub-phase of the Strategy phase.

RANDOM ATTACKS: Models do not have a normal Attacks characteristic. Instead, a dice roll is specified. Each time the model attacks in combat, roll the dice to determine the number of attacks. Unless otherwise stated, if a fighting rank contains more than one model with this special rule, roll separately for each.

RANDOM MOVEMENT: Models do not have a normal Movement characteristic. Instead, a dice roll is specified. When the model moves (for any reason), roll the dice to determine its maximum move. Models move in the Compulsory Moves sub-phase. They cannot march or declare a charge. They can wheel to change direction but cannot perform any other maneuvers. If the model contacts an enemy unit during the Compulsory Moves sub-phase or while pursuing, it counts as having charged. Model aligns to the enemy unit and halts. A unit charged in this way can only Hold. If every model in a unit has this special rule, roll once for the entire unit. If 2+ models have different Random Movement values, roll for each and use the lowest result for the entire unit.

REGENERATION (X+): The model can make a 'Regeneration' save. The target value of a Regeneration save is shown in the brackets. A Regeneration save is not modified by the AP of a weapon and can be made in addition to an armour and/or Ward save. Any wounds saved by a Regeneration save still count for combat resolution. Cannot be used if model is Flammable.

REGIMENTAL UNIT: Unit can be accompanied by 'detachments'.

REQUIRES TWO HANDS: Model cannot use a shield with this weapon during the Combat phase. A shield may still be used against wounds caused by shooting or magic during other phases of the game.

RESERVE MOVE: If the unit does not charge, march, or flee during the Movement phase of its turn, it may make a Reserve move at the end of the Shooting phase, after all shooting has been resolved. A unit making a Reserve move follows the Basic Movement rules. It may maneuver normally but cannot march.

SCOUTS: These units may be deployed after all other units from both armies. They can be deployed anywhere on the battlefield that is more than 12" away from an enemy model. If deployed in this way, Scouts cannot declare a charge during their first turn. If both armies contain Scouts, a roll-off should determine which player deploys Scouts first. The players then alternate deploying their scouting units one at a time, starting with the player who won the roll-off.

SHIELDWALL: Once per game, during a turn in which it was charged, a unit in a Close Order formation that chooses to use shields, may Give Ground rather than Fall Back in Good Order.

STOMP ATTACKS: Can only be made by a model in base contact with the enemy. Stomp Attacks are made in combat and always strike at Initiative 1 (regardless of modifiers) and hit automatically using the unmodified Strength characteristic of the model.

STUPIDITY: Unless engaged in combat, this unit must make a 'Stupidity' test during the Start of Turn sub-phase of its turn.

To make a Stupidity test, test against the unit's Leadership value. If this test is failed, the unit becomes Stupid. A Stupid unit:

- Moves during the Compulsory Moves sub-phase.
- Must move straight ahead, without performing any maneuvers.
- Cannot march or declare a charge.

A unit or mount that does not have this special rule becomes subject to it when joined or ridden by a character that does.

SWIFTSTRIDE: A unit which consists entirely of models with this special rule increases its maximum charge range by 3" and, when it makes a Charge, Flee, or Pursuit roll, may add +D6" to the result.

TERROR: Model causes Terror. Model also causes Fear (see Fear).

- When a unit that causes Terror declares a charge, the charge target must immediately make a Leadership test. If the test is failed, it must Flee. If the test is passed, it can declare its charge reaction as normal.
- If the winning side of a combat includes one or more units that cause Terror, each unit on the losing side will make its Break test with a -1 Leadership modifier.

If a charged unit cannot choose to Flee, it does not test. Models that cause Fear will Fear models that cause Terror. Models causing Terror are immune to Terror. A unit that does not cause Terror does not become immune when joined by a character that does.

TIMMM-BERRR!: When this model is reduced to zero Wounds, the winner of a roll-off chooses which arc (front, flank, or rear) it will fall into. Any units that are within the chosen arc and in base contact with this model suffer D6 hits, each using the Strength characteristic of the model, with AP -1. Once these hits are resolved, the model is removed from play.

UNBREAKABLE: If this unit loses a round of combat, it is not required to make a Break test. Instead, it will automatically Give Ground. Characters that are not Unbreakable cannot join units that are, and vice versa.

UNSTABLE: When this unit loses a round of combat, it loses one additional Wound (cannot be saved) for every combat result point by which it lost. These Wounds are lost after combat results have been calculated but before Break tests are made. If an Unstable unit contains any Unstable characters, allocate wounds to the unit until each model has been allocated one wound. Any remaining wounds are divided between the character(s) and the unit.

VANGUARD: After deployment, this unit may make a Vanguard move. A unit making a Vanguard move follows the Basic Movement rules. It may maneuver normally but cannot march. If both armies contain Vanguard units, a roll-off determines who moves first. The players then alternate moving their Vanguard units one at a time, starting with the player who won the roll-off.

VETERAN: If the majority of models have this special rule, the unit may reroll any failed Leadership test (not a Break test).

VOLLEY FIRE: When this unit makes a shooting attack, half of the models in each rank behind the front rank (or front two ranks if the unit is on a hill), rounding up, can shoot. These attacks are in addition to shooting attacks from the front rank, or front two ranks if the unit is on a hill. A unit cannot Volley Fire if it has moved for any reason during this turn (including reforming), or when making a Stand & Shoot charge reaction. Models in the rear ranks use the line of sight of the model at the front of their file.

WARBAND: Unless it is fleeing, a Warband gains a +1 Leadership modifier equal to its Rank Bonus, up to a maximum of Leadership 10. A Warband cannot use this modifier when making a Restraint test. In addition, if the majority of the models in a unit have this special rule, it may reroll its Charge roll. Unless a character also has this special rule, their Leadership cannot be modified by this special rule. A Warband can use either its own modified Leadership, the modified Leadership of a Warband character, or the unmodified Leadership of a non-Warband character, whichever is higher.

WARP-SPAWNED: A model with this special rule cannot make a Regeneration save against a wound caused by a Magical attack. Characters that are not Warp-Spawned cannot join units that are, and vice versa.

TURN SUMMARY

1. The Strategy Phase
2. The Movement Phase
